

Weaving Polyhedra -- contact B. Monson  
at U.N.B. for more info.

Instructions: Cut out identical strips as shown and fold on the interior lines.  
You could use different colours for each strip. Now weave the strips so that  
-no open edges are left ( meaning that every edge of the solid  
polyhedron is covered by at least one strip), and  
- each strip is exposed the same amount.
